

Jonathan Bohorquez Q.

Software Engineer

Summary

I'm a full-time software developer with more than 7 years of experience. During that time, I have worked on the front end and back end for different projects: designing and redesigning news websites, creating eCommerce, tuning the performance of corporate and personal websites and, integrating new technologies into existing applications.

Skills

In my time as a Software Engineer, I have developed the skills and aptitudes that have helped me to be successful. I've learned valuable soft skills, like how to work with people, project management, teamwork and communication through experience. Then I've taken this same knowledge both personally and professionally by working alongside different cultures, countries and people in different organizations in order to build my skills further.

Soft Skills

Problem solving oriented

- Analytical
- Curious
- Iteration of improvements based on metrics
- Experimentation to better understand the solution to a problem
- Deepening in the niche in which the solution is designed and built

Organization and time management

- Task prioritization
- Use and management of available resources
- Planning with adaptability
- Respect for own time and others in meetings
- Focused on a clear goal
- Estimation of times based on past iterations

Communication and teamwork

- Profound listener
- Mindful of body language
- Concise in the message
- Focused on teaching and training
- Multi-cultural communication
- Negotiation
- Empathic
- Confidence in the message
